Findings

This run recorded 28,811 access outliers and 2,328 hygiene issues.

They concentrate in a few peer groups: Human Resources / Human Resources Associate (5,354); IT / IT Associate (2,430); Human Resources / Manager, Human Resources (2,181). How unusual access looks is measured against peers, so a large group makes any single holder look rarer than a small one does.

Of the 28,811 findings measured against peers, 22% are a lone holder: one person with access nobody else in their peer group has.

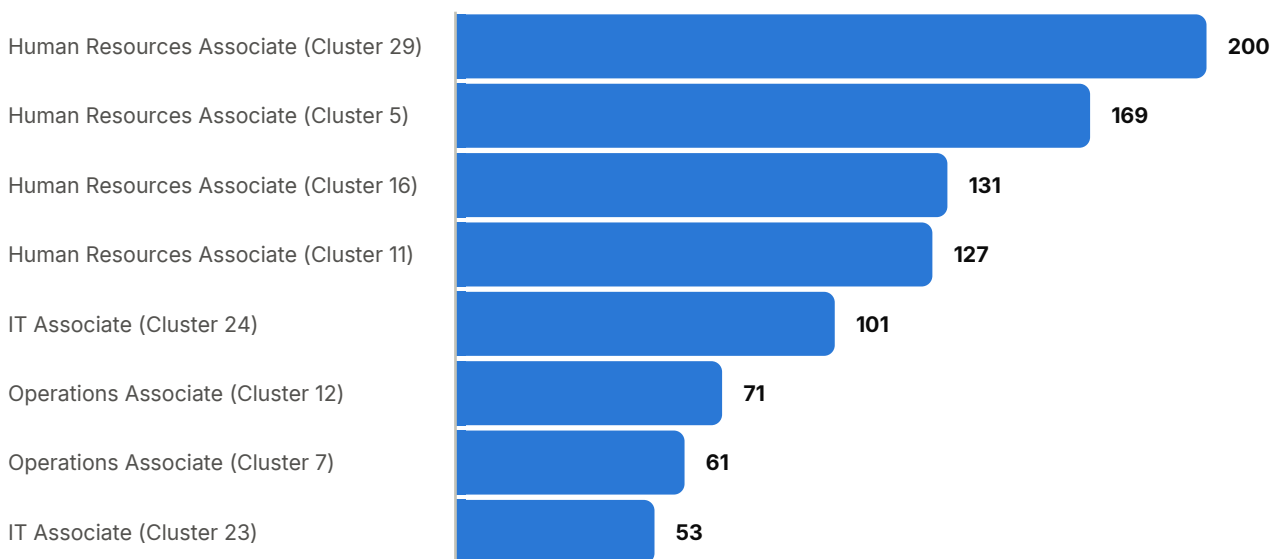

12 of 31,139 findings, one from each of 12 peer groups, so the table spans the estate rather than ranking into one corner of it. The complete set is in the Excel and CSV exports.

Candidate roles

Each role below was discovered from the access people actually hold, not taken from the organisation chart. The cluster in a role's name is the group of similar-access people it was mined from, so two roles can share a department and title and still be different roles.
